# Internet Leased Line

Tata Docomo offers a high performance, carrier grade and dedicated connection, which gives you an
individual, permanently assigned, uncontested connection or 'port' on Tata Docomo Internet backbone
network. It's an ideal solution for businesses that are outgrowing their dial-up and need a dedicated
connection for 24-hours-a-day access
Supporting the extensive range of connecting carriage service types, speeds and usage
options, Tata Docomo has the flexibility and scalability to meet the needs of all types and sizes
of businesses.

Business benefits
• High-speed connections of up to 1 Gbps with Ethernet
• Carrier-grade connectivity – Connect to one of the largest service providers in India, which means you
avoid congestion and configuration issues for better performance
• Robust and resilient backbone capacity – Tata Docomo provides some of the most robust and resilient
backbone architecture operated by any service provider in India, which gives you a decided advantage
when it comes to throughput, latency and packet loss
• Reach – Connect to Internet from more than 200+ PoP locations across India
• Exceptional service level agreements
• Online performance reporting
• Round-the-clock customer support

# PRI

**Grow with a future ready voice network**

Primary Rate Interface (PRI) is a service that enables connection of up to 30 voice channels to an enterprise EPABX on a single line. Each channel can be configured for incoming, outgoing or both functionalities.

**ISDN PRI is a local exchange access service that creates a direct digital connection** of 30 channels of 64 kbps each, (2Mbps for a PRI) from Tata Docomo switch to provide voice, data, image and video services on a single line.

**Direct line for each user**
Direct line to each user via Direct Inward Dialing (DID), and Direct Outward Dialing (DOD)

**Enterprise friendly billing system**
Caller ID extension wise billing to provide the user with the capability to
extension and control the cost

**Ease of management**
Highly scalable, offering 30 channels in a single connection

**Disaster recovery**
Circuit switched capability can provide alternate paths in the event of emergency

# SIP Trunk

**IP based PSTN Telephony that can support up to 1500 voice channels over a single link**

Unlike in traditional telephony, where bundles of physical wires are delivered from the service provider to a business, a SIP trunk allows a company to replace these traditional fixed PSTN lines (PRI/BRI) with a SIP trunk over an IP based transport network. SIP Trunk connects a private business-class phone system with a IP based PSTN.

Financial benefits
 Save on CAPEX because no hardware upgrade required on multiple PRI ports. SIP Trunk supports up to 1500 voice channels over a single link
Low maintenance, reduced administration and overhead costs while increasing efficiency

Operational benefits

On just one single link, your business can avail upto 1500 voice channels. This helps you
 Simplify your network by reducing multiple physical links coming to your office
You can scale up easily as you need for voice channels grows

Be future ready with benefits of convergence

SIP Trunk services in future will evolve into a platform to enable Unified Communication and support the high-value applications including Channels-on-demand, Aggregated SIP Trunk and Disaster recovery solutions.
